

# Integration of Machine Learning Models for Real-Time Detection of Advanced Persistent Threats and Network Intrusions

Chapter	Title	Page No.
1	Comprehensive Taxonomy of Advanced Persistent Threat Techniques and Mitigation Approaches in Network Defense	11
2	Comparative Analysis of Machine Learning Algorithms for Anomaly Detection in Large-Scale Distributed Networks	42
3	Advanced Feature Selection Techniques for Machine Learning-Based Detection of Encrypted Malicious Traffic	72
4	Real-Time Network Packet Inspection Using Deep Learning Models for Persistent Threat Identification	103
5	Multi-Stage Threat Analysis with Hybrid Machine Learning Models Combining Static and Dynamic Data Features	131
6	Dimensionality Reduction and Data Augmentation Methods for Enhanced Detection Accuracy in Sparse Threat Environments	160
7	Exploiting Graph-Based Machine Learning Techniques for Identifying Lateral Movement Patterns in APT Attacks	188
8	Scalability Challenges and Solutions in Machine Learning Algorithms for High-Throughput Intrusion Detection Systems	218
9	Real-Time Ensemble Learning Frameworks for Adaptive Detection of Evolving Persistent Cyber Threats	248
10	End-to-End Integration of Reinforcement Learning and Deep Q-Networks for Autonomous Cyber Threat Remediation	276
11	Application of Federated Learning Models for Privacy-Preserving Detection of Cyber Attacks in Cross-Domain Networks	307
12	Advanced Persistent Threat Identification in Cloud Infrastructures Using Tensor-Based Machine Learning Approaches	334
13	Security Event Correlation Using Graph Neural Networks for Threat Hunting and Response Automation	362
14	Combining Explainable AI and Advanced Visual Analytics for Threat Attribution and Response Justification in Machine Learning Frameworks	388

15	Benchmarking Techniques and Evaluation Metrics for Machine Learning-Driven Network Intrusion Detection Systems	146
