

Artificial Intelligence and IoT for Disaster Risk Management and Sustainable Environmental Systems

Chapter	Title	Page No.
1	Artificial Intelligence and IoT Frameworks for Climate Change Monitoring and Environmental Sustainability	17
2	Machine Learning–Based Disaster Prediction Systems for Floods, Landslides, and Cyclones	47
3	Deep Learning Approaches for Landslide Prediction and Risk Assessment	76
4	AI-Based Climate Change Impact Assessment on Ecosystems and Human Health	106
5	Machine Learning Models for Early Warning Systems in Natural Disaster Management	136
6	AI and IoT-Based Water Quality Monitoring and Pollution Control Systems	163
7	Big Data Analytics for Climate Change and Environmental Impact Assessment	192
8	Deep Learning Techniques for Cyclone Prediction and Weather Forecasting	221
9	AI-Based Smart City Systems for Disaster Preparedness and Environmental Monitoring	248
10	IoT and Machine Learning for Smart Agriculture under Climate Change Conditions	276
11	AI Applications in Public Health Risk Assessment due to Environmental Pollution	303
12	Machine Learning Models for Climate Change Effects on Economic Growth	333
13	AI and IoT Frameworks for Sustainable Water Resource Management	363

14	IoT-Based Environmental Monitoring Networks for Smart Cities	390
15	Machine Learning Techniques for Earthquake Prediction and Seismic Risk Analysis	419
16	IoT and AI Integration for Real-Time Air Quality Monitoring in Urban Environments	449
17	Predictive Analytics for Environmental Pollution Detection Using Machine Learning	477
18	Artificial Intelligence for Evaluating Cyclone Resilience of Civil Infrastructure	507
19	AI-Driven Structural Health Monitoring of Buildings in Disaster-Prone Regions	534
20	Future Trends of Artificial Intelligence, Machine Learning, and IoT in Climate Resilience and Disaster Management	563
